DETAILED ACTION

The Requirement for Restriction/Election mailed December 19, 2007 is withdrawn. This action is based on the amended claims, filed April 18, 2008.

Species Election

This application contains claims directed to the following patentably distinct species: the characteristics of the ocular implant. The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

First Species Election Requirement

Applicant is required to elect which, if any of the following components must be present in the punctual plug:

- An exposed medication-discharging supply of the active agent
- Stem
- Outer stopper structure
- Inner stopper structure

Art Unit: 1618

If the presence of an exposed medication-discharging supply is elected, Applicant is also required to elect if the presence of agent-discharging bands is required and if the agent is disposed on all external surfaces of the plug body.

Second Species Election Requirement

Applicant is required to elect if the active agent is a medicine or is an active agent that is not a medicine. If a medicine is elected, Applicant is further required to the active agent present. Examples of acceptable species can be found in claims 16 and 17.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11 – 36 are generic.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing

the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.
